A: There is a way to solve this: Prerequisite: 1) VirtualBox version 5.1.26 2) Windows XP SP3 ISO. The 32-bit version is better than the 64-bit version because the 32-bit version can run 64-bit guest. Solution: 1) Open "My Computer" and double-click "C:\ProgramData\Oracle\VirtualBox\VBoxGuestAdditions.iso" to run the VBoxGuestAdditions_x64.exe file. 2) Once the ISO has been copied to the host, open up your browser of choice and point it to the IP address of your virtual machine. Enter the username and password and proceed to install. 3) When the installation is finished you need to reboot the virtual machine to make the VBoxGuestAdditions effective. 4) After rebooting you can install Windows XP SP3 directly. PS: Tested with WinXP SP3 x64. Q: In CSS, what is the difference between applying a display:inline; and text-align:center; I have a large amount of text that I want to be centered on a page. I am wondering if it's better to make the text display:inline; and then align the container that contains it via text-align:center; Or would it be better to simply write the text in the page source, and then apply text-align:center; to the container? Which of these is more beneficial? A: Both are valid, although text-align is more common. Here is an example (notice the difference in the "center" and "center" in text-align): The quick brown fox jumped over the lazy dog. The quick brown fox jumped over the lazy dog. Of course, this would only make sense if the two HTML elements share a common parent. Otherwise, you may want to use display:inline or display:block. Q: How to remove an element of a sorted array I have a code below and I was wondering how to remove a specific element of a sorted array. For example if I want to remove the element who's index is 2. public static void main(String[] args) { Scanner input = 2d92ce491b
