EXAMPLE OF USE Rather than blindly hooking a serial device to the USB-serial port just because it looks serial. There are actually several serial drivers. None of them are actually called "USB serial" devices, but if they happen to be listed as such, you may want to avoid. Are there any serial adapters that use an FTDI chip instead of a standard UART...Since the beginning of modern photolithography, it has been a constant goal to improve the resolution of the photolithographic process in order to improve the yield and reduce manufacturing costs. As optical components employed in most lithographic exposure systems are designed to operate at a specific wavelength (typically 193 nm) it is necessary to use an expensive optical filter to remove the same portion of the light which is not required for exposure. This has led to the development of so-called half-tone masks where the exposure is effected at two different wavelengths. Half-tone masks are also known in the art as alternating phase (AP) masks.
