Additionally, you may create extensive slideshows, with multiple photos and background music. Simply create a catalog and add all the photos you wish to include in the sequence, then set options regarding photo resizing, output format or audio-video quality. You may also modify photos by morphing their shapes or outer lines. Thus, a special selection is required: you need to select the object you wish to morph using the anchor points tool. The anchor points are specifically placed dots that you can drag in or out in order to adjust the shape of the object. You can apply photo morphing or warping.
