Most quote books are in the form of a series of card-sized booklets bound with metal clips. An alternative is to keep a spiral-bound notebook with individual cards bound at the end. Creating a quote book is more complex than simply collecting quotes and putting them in a notebook. That's because you must account for how the quotes will be displayed and presented to the reader. As a result, you may want to create a card template for the quote you want to include in the book, which would include the name of the author and the source, location, or time and date of publication. You may even want to create a page for the dedication to the person whose quote you want to include or to which you want to dedicate the quote book. Finally, your quote book should contain the cover as well as a page for the title that you want to include in your book. Finally, consider whether you want to include your signature (if you are signing your work, that is) and your contact information on each page of your quote book. ## Creating a Quote Template The first step in creating a quote book is to create a quote template. This is a simple four-step process: 1. Create a new blank canvas using the 800 x 600 pixel template canvas in the workspace. 2. Enter text at the top of the canvas where you want the text to appear, and set the size of the text to 24 pixels. Use the type tool to create the text. 3. Create a new layer below the text and use the paint bucket tool (refer to Figure 20-1) to fill the layer with black. 4. Select the text layer. Choose Edit > Copy. Open the Edit > Paste Options dialog box

When I didn't speak French or couldn't google my question, I'd feel frustrated, helpless, and baffled. I'd read my books, search through Google images, try to memorize vocabulary—but nothing would help. At that point, I knew something had to change. I needed to be better equipped to speak French. I decided to enroll in Rosetta Stone's French Language Program in 2011. I knew it would help me, but I wasn't sure how. Here's what worked for me: Listen to the French I learned my French listening to audio books. I'd go into a store, listen to "French for Speakers of Other Languages," and repeat the words and phrases in my head. I'd do this while sitting in my car, which is when I encountered a common misconception: "Pronounce it phonetically!" Do not do this! It's not quite how the French speak it. And that's okay! I still got the gist. "...you should only remember the pronunciation, as you don't need the context in order to understand the French." Rosetta Stone Create your own French I learned that I could create my own French, meaning, I didn't have to stay inside Rosetta Stone's books. Since French is an easier language than English to pick up and is thus a starting point for those learning a second language, I used that to my advantage. Each day, I'd start with an article—even a transcript of a French program—and try to create a sentence on my own. I'd create a sentence on the spot, and yes, sometimes I'd forget a word or stumble over certain grammar points. But I'd try. It's hard at first! And yet...it works. I got better at speaking the language. Commit to Rosetta Stone "At least every day, set aside 20 minutes for learning French," Rosetta Stone recommends, adding, "so you're not just learning on the go." I can hear you now. "But I'm busy!" I'm not, I promise. Once a week, I

Q: Is Polymer supported in Sublime Text? Is Sublime Text compatible with Polymer? I heard there's just a tiny bit of support. But is this completely unsupported? Does anyone have first hand experience with this? A: Disclaimer: I am not affiliated with Polymer. From their homepage: Sublime Text has been discontinued If you are still unsure, then use Chrome's "Developer Tools" (Ctrl + Shift + I) and put the following on the console: Polymer is not recognized as a valid HTTP or HTTPS URI (missing scheme). Make sure the scheme is correct and the file path is correct, and try again. It appears that if you are using Sublime Text then it does not recognize the markup language HTML or JavaScript. A: I know this doesn't explicitly answer your question, but what does Polymer.io have to say? Sublime Text 2 is not supported in production. It's not officially listed as unsupported, but there's really no reason you'd use it. There are however a couple of projects providing our editor completions, whose format we can't change without breaking compatibility with older versions. If you have a chance to upgrade, I highly recommend it.
