JUAN GONZALEZ: Well, for over two years, a coalition of families and environmental and civil rights organizations have worked with the state to try to find a way to address this pollution problem. It's come to be known as the Groundwater Contamination Superfund site. And the EPA has now proposed a remedy, which is subject to public comment. The agency wants to put the aquifer back into its pristine state. It proposes having the water from the aquifer pumped back up to the surface where it can be used. But opponents say that the move will cause an irreversible economic disaster in a region already struggling to meet the needs of the working poor. Lincoln Brower is with the Alabama Rivers Alliance. He joins me now. And he's been watching this process very closely. And, Mr. Brower, what are your views on this proposed remedy? LINCOLN BROWER: Well, I think what they're proposing to do is really bizarre. We don't pump water out of aquifers to a place that we store it. So, I'm not quite sure what they're doing. And also, you know, the thing about this clean-up, as they call it, is that it's not going to solve the problem. So, they're saying that they're going to pump out our aquifer, but they're not going to take the tetrachloroethene from it. So, it doesn't solve the problem, and the people who are in the community suffer the most from the contamination. JUAN GONZALEZ: And what are your concerns,
