The whole application is developed using a web application programming (J2EE) and the software is maintained using the.NET (C#) development platform. This software allow ECE students to make sure that they have a strong knowledge about electronics and computer programming. Students can make sure that they are able to choose the correct option when is a single possible choice in the quiz. Another possible use of this software is to allow teachers to make sure that students are really using the knowledge that they learn in the classroom. It can also be used for other engineering disciplines. In the next project I'll try to use the new.NET framework features to implement a more secure quiz. In this first project I've used a text file to export questions to be imported in the application. The problem is that the questions are not imported in the same order in which they appear in the text file. The order is import and the first question appears in the same order in which is read from the text file. The order of the questions imported is wrong.
