The mathematical keyboard is a collection of keystrokes that is supposed to make using mathematics as easy and comfortable as possible. This macro collection will make writing and editing text containing mathematics as easy as using a modern computer keyboard. It was designed with the same idea and design as the Microsoft Natural Ergonomic Keyboard 4000 and as with that keyboard it features two separate areas to allow you to work on two different documents. Simply press the four keys "3" "4" "5" and "6" to get the mathematical keyboard for the current document. The mathematical keyboard in this program is divided into two categories. • C. Numerical keyboard: This is the standard keyboard with numbers and basic mathematical symbols (letters and punctuation). • C#. Visual keyboard: This is the mathematical keyboard for documents that have the preview feature enabled. In this version of the mathematical keyboard the special keys "C" and "Z" are mapped to the "C#" and "Z" keys. If you wish to get the mathematical keyboard for the "C#" and "Z" keys just press "5" and "7" respectively. Keyboard shapes, colors and numbers The keyboard contains all the standard key shapes and colors. The keyboard also allows you to redefine the colors and shapes of the keycaps to fit your personal preference. The keyboard also allows you to have a different color background for your mathematical keyboard. The mathematical keyboard is designed for easy usage, but it also contains extra visual options that will enhance the way you use the mathematical keyboard. There are several ways you can customize the keyboard and its behavior: • Pressing the Esc key will bring up the menu for the current document. • Pressing the F key will open the F-Open menu. • Pressing "Num lock" or "Scroll lock" will display the numerical keyboard or the visual keyboard on the current document respectively. • Pressing the "Z" or "C#" keys will bring up the Options window which contains a large number of settings that will help you customize the behavior of the mathematical keyboard. You can change the key colors, the keycaps colors, the border colors, the border thickness, the letter size and the letter spacing. You can also change the location of the keys, the keyboard shape and the keycaps shape. There are two ways to access the settings: • From the menu: Just press the "Z" or "C#" keys to 77a5ca646e
