I can't seem to get it working. I have a video that I want to blur but it doesn't seem to work. I'm using Blender 2.79. Here is the video: And here is what I've done to try to make it work: Set global motion blur and set it to 2. Select the whole video. Right click and choose Render > Motion Blur. A grey window appears and says "Render Result: Could not find target motion blur". So it doesn't work but it doesn't give an error either. I also tried selecting every frame of the video and then right clicking on every one of them to render motion blur but it didn't work. Is there something I'm missing? Is this a bug?
