PortTunnel Crack Free For Windows

PortTunnel is a useful port mapper that can change the connections settings for your network adapter. The program can be used for debugging network tools by customizing the port mappings and logging the statistics. PortTunnel's main mission is to create a connection between two ports and route the data according to the available parameters. For instance you can block certain IP addresses or redirect them to a certain port by using the IP Security feature. The application is also able to tunnel the data transferred through a proxy server or over an FTP connection. Each mapping can be configured by setting a speed limit for incoming and outgoing connections or by limiting the number of simultaneous connections for every IP address. If you need to secure the communication, the app supports the SSL cryptographic protocol and is able to add an authentication header to all the incoming or outgoing packets. This feature comes in handy when you are dealing with information that needs to be encrypted. The program features a simple interface which displays the routed ports and the traffic information. The users who need more information about the port activity need to enable the statistics logs and select the data format. However, the port mapping features are complex and require previous experience in networking and port mapping. The lack of documentation makes the program harder to use for the casual user but seasoned users should understand the basics from the interface and the readme file. Overall, PortTunnel comes in handy for the advanced users who need to change the port mapping on their devices. PortTunnel Screenshot:Q: Cartesian product of two tables I'm currently writing a stored procedure that accepts two very similar tables. At the end of the first table, there is a column called IsChecked with a value of 1 or 0. The first table is: ID | PrimaryKey | FirstName | LastName | Birthdate | 0 | 1 | John | Doe | 1990-10-01 | The second table looks like the first one, but at the end, the IsChecked column is 1 instead of 0, so the result set looks like: ID | PrimaryKey | FirstName | LastName | Birthdate | IsChecked | 0 | 1 | John | Doe | 1990-10

What's New in the PortTunnel?

PortTunnel is a windows application that can be used to change the IP address settings for your network adapter. You can choose the source and destination IP address, the Subnet mask, the gateway and the DNS server. The settings have to be configured before the app starts and are usually saved when you exit the application. If you have limited experience in PC networking, the app is hard to use. PortTunnel supports most of the network types you will encounter, including the IPV4 and IPV6. However, the app lacks a documentation for beginners and a custom configuration is not built into the application. It is not uncommon that a user can spend a lot of time without knowing that PortTunnel's main purpose is to change the IP settings. PortTunnel Features: • Basic IP settings for IPV4 and IPV6: - Address - Netmask - Gateway - DNS server - Authentication method • Port mapping: - Ports: Source port: IP address for a client Destination port: IP address for a server Redirection to a proxy: - IP address: port number - Port number - Proxy server • Tunnel types: - Local - Remote (ftp) - Exotic HTTP You can use the IP Security to filter the incoming connections or to redirect the traffic based on the IP address. • SSL: - Use a certificate - Intermediate certificates - Public key - List of acceptable CAs - Validation Method - Each certificate in the list - Certificate File • Statistics Log: - Header Length (bytes) - File Size (bytes) - Date Received (Date in GMT) - Date Modified (Date in GMT) - Port Number - Port Number (bytes) - Bytes In (bytes) - Bytes Out (bytes) - Bytes In Bytes Out (%) - Incoming IP Address - Incoming Port Number - Outgoing IP Address - Outgoing Port Number - Reservation (bytes) - Data Size - Data You can limit the number of simultaneous connections for every IP address. - Number of simultaneous connections: - Incoming IP address - Outgoing IP address • Proxy settings: - IP address: port number - Port number: - Authentication - Certificate - by File - Certificate - by list - Certificate - by pem file
