Microsoft Dynamics CRM 2013 Custom Code Validation Tool [32/64bit]

The tool offers a task list: The task list is divided into several parts. The first part is to determine whether you have a script or not. If the application script is present, then analyze it. If you do not have any script, then go to the next step. When the application script is present, analyze its contents and try to locate the cause of the error. In the case where the contents of the script are correct, then do not check it. In order to analyze the scripts, an emulator is necessary. This tool will provide one for you. In addition to this, it will be able to analyze the script contents and provide feedback. Note: Before you start using this tool, it is important to ensure that you understand the basic concepts of server-side JavaScript. Otherwise, it is impossible to find any problems with the script. As a result, it is recommended to perform these checks prior to your efforts. Use the CustomCodeValidationTool.exe tool. Once the process is complete, you can make your analysis to look for potential issues. Click Configure to select the scripting engine. Type in Microsoft Ajax (jQuery/Microsoft Ajax). If the settings are correct, then click Continue. It is important to ensure that the Create new parameters and parameters are set to true. Click on Run. Once the code is run, a window will open. To evaluate this, click on Next. We have to run the script. To this end, click on Update and then click on the button. Notice: The control associated with the evaluation dialog will be automatically closed. Click Close if you want to open this control. Go to the tab "Script". Here, you will see the result of the evaluation of your code and the system outputs. You should focus on several parts of your code: The script The JSON data that was generated by the script The output of your script In the "Script" tab, you should enter the locations of the script that has been evaluated. Here are the places in which you can enter the script. You can use the "Run Control" function if you prefer. The script When you enter the script, please ensure that the control named "Script Control" is present. If you do not have this control, you can use the "Run Control" function in order to run the script. Select the location of the script
